

Rapid GSM

Mobile Convergence when you need it

Private Mobile Networks (PMN) provide a solution for rapid deployment of temporary and secure GSM coverage for emergency situations. Located on a vehicle the Private Mobile eXchange can be used to create an instant coverage in crises situations.

Features and Benefits

- Maintain business continuity - the private mobile network continues to operate when the macro network is not available
- Rapid deployment at new locations
- Satellite or IP Broadband backhaul
- Standard 2G mobile phones
- Instant coverage
- Reduced infrastructure dependencies

Implementation Overview

- Calls between personnel at the location are managed locally without additional authorisation being needed
- Calls to phones can be linked by satellite backhaul or local IP connection
- Both PSTN and mobile network access are provided
- Typical 350m diameter coverage per base station instantly
